Business Requirement Document
For
Restaurant Management

Summary Executive

A configurables, all-in-one restaurant management platform that handles dine-in, takeaway, delivery, and multi-branch operations. It centralizes orders, customers, and business data with role-based access, online and offline order management, GST-compliant billing, payments, CRM, loyalty programs, and real-time dashboards. The system is secure, mobile-friendly, scalable, and offered via a subscription model with free trial and 24×7 support.

Key Benefits

1. Manages all restaurant operations in one place

2.Saves time with centralized orders and data

3. Works for single outlet and multi-branch restaurants

4. Improves customer experience with online ordering & tracking

5.Increases sales through CRM, loyalty, and offers

6.Ensures GST-compliant billing and easy payments

7.Gives clear business insights with dashboards & reports

8.Secure, mobile-friendly, and easy to scale

9.Reduces errors with role-based access and automation

Purpose

The purpose of this project is to build a unified, scalable restaurant management system that streamlines daily operations, improves customer experience, and provides data-driven insights for better decision-making across single and multi-branch restaurants. It aims to centralize orders, billing, customers, staff, and reports into one secure platform, reducing manual effort, increasing efficiency, and supporting business growth.

Objective -

The primary objective of the Restaurant Management System is to design and deliver a one-stop, configurable, and scalable digital platform that streamlines and automates end-to-end restaurant operations for single-outlet and multi-branch restaurants.

Key Objectives :

- **Operational Efficiency**
  To simplify and automate day-to-day restaurant operations such as dine-in, takeaway, delivery, and door-to-door services by centralizing order processing, billing, payments, and customer management into a single system.

- **Centralized Data Management**
  To provide a unified platform that securely centralizes orders, customers, menus, pricing, staff roles, and business data, enabling better visibility, control, and decision-making across all branches.

- **Enhanced Customer Experience**
  To improve customer satisfaction through online ordering, real-time order tracking, table reservations, loyalty programs, personalized offers, and multi-channel access (web and mobile).

- **Flexible Role-Based Access Control**
  To allow restaurants to define custom roles and permissions for owners, managers, staff, and administrators, ensuring secure and controlled access to system functionalities.

- **Business Growth & Scalability**
  To support restaurant growth by offering multi-branch management, scalable infrastructure, and future-ready features such as inventory management, KDS, staff management, and regional language support.

- **Compliance & Security**
  To ensure compliance with GST regulations, data protection standards (GDPR), and secure authentication mechanisms such as 2FA/MFA to protect sensitive business and customer information.

- **Data-Driven Decision Making**
  To provide actionable insights through real-time dashboards, KPIs, and detailed reports on sales, inventory, customers, and branch performance, with export options for Excel and PDF.

- **Seamless Integration & Accessibility**
  To integrate smoothly with third-party payment gateways, social media login APIs, and delivery services while enabling mobile access for owners, staff, and customers anytime, anywhere.

- **Cost-Effective SaaS Solution**
  To offer a subscription-based SaaS model with a free trial, reducing upfront costs for restaurants while ensuring continuous updates, maintenance, and feature

enhancements.

- **Reliable Customer Support**
  To provide 24×7 chat-based support and ticket-based issue management, ensuring uninterrupted operations and quick resolution of system issues.

Expected Outcomes

1. Order Management

- Customers can order food easily online or offline
- Orders are tracked in real time without confusion
- Kitchen and staff work faster with fewer mistakes

2.Inventory Management

- Stock levels are always accurate
- Low stock alerts prevent item shortages
- Food cost and wastage are controlled

3.Customer Relationship Management (CRM)

- Loyalty points increase repeat customers
- Feedback helps improve food and service
- Customer details and order history are saved

4.Reporting & Analytics

- Owners clearly see sales and profit
- Busy hours and best-selling items are identified
- Better business decisions are made using reports

5. Staff Management

- Staff schedules are organized easily
- Roles and permissions avoid misuse
- Team communication improves daily operations

6. UI & UX

- System is easy to learn and use
- Mobile access allows work from anywhere
- Dashboards show important information quickly

7.Integration & API

- Payments and delivery services work smoothly
- System connects easily with other tools
- Future customization becomes simple

8.Security & Data Privacy

- Customer and business data stays safe
- Data loss is avoided with backups
- Legal compliance builds customer trust

9. Scalability & Performance

- System works well even as business grows
- Fast performance improves user satisfaction
- No downtime during peak hours

10.Customer Support

- Issues are resolved quickly
- Self-help reduces support dependency
- Regular updates keep the system reliable

11.SaaS Model

- Restaurants pay only for what they use
- Easy upgrades without extra effort
- System always stays modern and updated

Project Scope

It covers the design and development of a complete restaurant management system that supports end-to-end restaurant operations. The system will include order management for dine-in, takeaway, and online orders, table reservations, real-time order tracking, kitchen display integration, and POS connectivity. It will provide inventory management with stock tracking, purchase orders, and recipe costing, along with customer relationship management features such as customer profiles, loyalty programs, and feedback collection. The platform will also offer staff management, role-based access, reporting and analytics dashboards, and third-party integrations for payments and delivery services. The solution will be delivered as a secure, scalable SaaS application with a user-friendly web and mobile interface, ensuring data security, performance, regular updates, and ongoing customer support.

Project Constraints

1. Technical Constraints

- Must work with existing POS systems and hardware
- Limited by chosen technology stack (software, database, hosting)
- Internet dependency for online orders and real-time updates

- Security and data privacy standards must be followed
- System performance depends on server capacity and network speed

2. Financial constraint

Fixed project bal Constraintsudget limits features and tools

- Cost of development, testing, deployment, and maintenance
- Subscription and licensing costs for third-party services
- Hardware and infrastructure expenses
- Limited funds may delay advanced features

3. Time Constraints

- Fixed project deadline
- Limited time for testing and bug fixing
- Faster delivery may reduce scope or quality
- Delays in approvals or requirements can impact schedule
- Parallel tasks may be restricted due to dependencies

4. Resource Constraints

- Limited number of developers and testers
- Availability of skilled technical staff
- Limited access to restaurant staff for requirement validation
- Dependency on third-party vendors or APIs
- Team workload and multitasking issues

Project Background

- **Technology-Based**

  Today, restaurants are using computers instead of manual work. Writing orders and managing stock by hand takes time and causes mistakes. This project helps automate restaurant work to make it faster and easier.

- **Problem-Based**

  Many restaurants face problems like wrong orders, slow service, and poor stock management. These problems reduce customer satisfaction. This project helps solve these issues by managing everything in one system.

- **Business Growth**

  Restaurants now offer online orders, takeaway, and delivery. Managing all this manually is difficult. This project helps restaurants grow by handling more customers easily.

- **Customer Experience**

  Customers want fast service, easy ordering, and special offers. This project improves customer experience with online ordering, reservations, and loyalty programs.

- **Management Support**

  Restaurant owners need clear information to make good decisions. Manual records are not reliable. This project provides reports to help control costs and increase profit.

- **SaaS Model**

  Old software is expensive and hard to maintain. This project uses a cloud-based system where restaurants pay a subscription and get regular updates and secure access.

Proposed Solutions:

- **Technology-Based**

  A computerized Restaurant Management System will be developed to automate order taking, billing, inventory, and staff management. This reduces manual work, saves time, and avoids errors.

- **Problem-Based**

A single integrated system will be used to manage orders, kitchen operations, stock, and reports. This helps reduce wrong orders, speed up service, and improve stock control**.**

- **Business Growth**

  The system will support dine-in, takeaway, and online delivery in one platform. It will be scalable so restaurants can handle more customers and expand easily.

- **Customer Experience**

  Online ordering, table reservations, order tracking, and loyalty programs will be provided. These features help customers get faster service and better satisfaction.

- **Management Support**

  The system will generate sales, inventory, and staff reports. These reports help owners make better decisions, control costs, and increase profits.

- **SaaS Model**

  A cloud-based subscription system will be used. Restaurants can access the software anytime, get regular updates, and avoid high installation and maintenance costs.

Opportunities:

The Restaurant Management System (RMS) provides the following business opportunities:

- **Process Automation**

  Automates order taking, billing, and reporting, reducing manual effort and errors.

- **Improved Customer Experience**

  Faster service, accurate orders, and multiple payment options increase customer satisfaction.

- **Revenue Enhancement**

  Sales analytics and menu performance insights enable better pricing and promotional strategies.

- **Cost Control**

Real-time inventory tracking helps reduce food wastage and unnecessary purchases.

- **Operational Transparency**

  Centralized system provides clear visibility into daily operations and performance.

- **Scalability & Expansion**

  Supports growth into multiple outlets or franchises with centralized control.

- **Digital Transformation**

  Enables integration with online ordering, delivery platforms, and digital wallets.

- **Staff Efficiency**

  Optimized staff scheduling, role-based access, and performance monitoring improve productivity.

- **Data-Driven Decision Making**

  Reports and analytics support informed business planning and forecasting.

- **Competitive Advantage**

  Use of modern technology helps the restaurant stand out in a competitive market.

Business needs :

The restaurant industry requires efficient management of daily operations to ensure profitability, customer satisfaction, and scalability. Traditional manual processes lead to errors, delays, and lack of transparency. A Restaurant Management System is needed to centralize operations, improve accuracy, and support informed decision-making.

- **Operational Efficiency**

  To automate order processing, billing, and reporting, reducing manual workload.

- **Accuracy in Billing & Orders**

  To minimize human errors and ensure correct transactions.

- **Inventory Control**

  To track stock levels in real time and reduce food wastage.

- **Improved Customer Service**

To reduce waiting time and enhance dining experience.

- **Financial Visibility**

  To monitor sales, expenses, and profits through reports.

- **Scalability**

  To support future expansion such as multiple outlets or franchises.

- **Compliance & Record Keeping**

  To maintain digital records for audits and tax purposes.

Project Scope :

The following key deliverables will be produced and handed over upon successful completion of the Restaurant Management System project:

- **Business Requirement Document (BRD)**

  Approved and signed-off BRD detailing business needs, scope, and opportunities.

- **System Requirement Specification (SRS)**

  Detailed functional and non-functional system requirements.

- **System Design Documents**

  High-level architecture design

- **Database schema and ER diagrams**

  Use case and workflow diagrams

- **Restaurant Management Application**

  Fully functional RMS with modules for orders, billing, inventory, staff, and reports.

- **Database Implementation**

  Configured and tested database with required tables and relationships.

- **Reports & Dashboards**

  Sales, inventory, and performance reports generated by the system.

- **Testing Artifacts**

  Test cases, test results, and bug-fix reports.

- **User Manual & Training Material**

  End-user documentation and basic training guidelines.

- **Deployment & Handover**

  Deployed system with basic configuration and access setup.

Exclusions:

following items are explicitly excluded from the current scope of the Restaurant Management System project. These may be considered in future phases:

- **Customer-Facing Mobile Application**

  No Android or iOS mobile app for customers is included.

- **Advanced AI / Machine Learning Features**

  No demand forecasting, recommendation engines, or predictive analytics.

- **Third-Party Delivery Operations**

  Delivery fleet management and rider tracking are not included.

- **Hardware Procurement & Maintenance**

  POS machines, barcode scanners, printers, or networking hardware are excluded.

- **Multi-Branch & International Compliance**

  Multi-country tax rules, currency handling, and language localization are excluded.

- **Customer Loyalty & CRM Programs**

  Reward points, coupons, and customer loyalty programs are not part of this phase.

- **Advanced Security & Compliance**

  Certifications such as PCI-DSS or ISO compliance are excluded.

Project Boundaries :

Project boundaries define the limits of the Restaurant Management System by clearly specifying what is included within the project scope (In-Scope) and what is excluded (Out-of-Scope). This helps control scope creep and ensures clear understanding among stakeholders.

❖ In-Scope :

The following activities and functionalities fall within the boundaries of this project:

- Management of restaurant operations including order
- processing, billing, inventory, staff, and reporting.
- Support for dine-in, takeaway, and basic online order entry.
- Role-based access for internal users such as owner, manager, cashier, and kitchen staff.
- Menu creation, pricing, and availability management.
- Table allocation and reservation handling within the restaurant.
- Inventory tracking and low-stock alerts for raw materials.
- Sales, inventory, and staff-related reports.
- Secure storage of operational and billing-related data.
- Deployment and use of the system within a single restaurant environment.

❖ Out-of-Scope :

The following activities and functionalities are outside the boundaries of the current project:

- Customer-facing mobile or web applications for ordering.
- Advanced AI/ML-based analytics, forecasting, or recommendation systems.
- End-to-end management of third-party delivery logistics.
- Procurement, installation, and maintenance of hardware devices.
- Multi-branch, multi-country, or multi-currency operations.
- Loyalty programs, CRM systems, and marketing automation.
- Advanced regulatory or security compliance certifications.
- Integration with large-scale enterprise or ERP systems.

Limitations

1. Functional Limitations

- The system does not support online food ordering.
- No integration with third-party delivery platforms (Zomato, Swiggy, etc.).

- Limited payment options (cash and basic card payments only).

2.Technical Limitations

- Requires continuous internet connectivity for real-time operations.
- No mobile application support in the current version.
- Hardware devices (POS, printers, scanners) are not included.

3.Operational Limitations

- Designed only for small to medium-scale restaurants.
- Does not support multi-branch or franchise management.
- Limited customization options.

4.Language & User Limitations

- Supports only English language.
- Requires basic computer knowledge for users.

5.Future Scope Exclusions

- No advanced analytics or AI-based features.
- No customer loyalty or CRM features in this phase.

Requirements

Core Features

Requirement ID	Module	Sub-Feature	Use Case	Requirement Description	Priority	Acceptance Criteria
FR-001	User Management	User Login	Log in to the system	The system shall allow authorized users to log in using valid credentials.	High	Users with valid credentials can access the system, while invalid credentials are rejected.
FR-002	Menu Management	Menu Item Management	Add, update, or deactivate menu items	The system shall allow authorized users to create, update, and deactivate menu items.	High	Authorized users can save changes, and the updated menu information is displayed correctly.
FR-003	Order Management	Dine-In Order Creation	Create an order and assign a table	The system shall allow staff to create dine-in orders and assign them to available tables.	High	The order is saved successfully and associated with the selected table.
FR-004	Billing	Bill Calculation	Generate a customer bill	The system shall calculate the bill using the applicable item prices, taxes, and discounts.	High	The generated bill matches the configured prices, taxes, discounts, and calculation rules.
FR-005	Inventory Management	Low-Stock Alerts	Receive an alert for low ingredient stock	The system shall alert authorized users when ingredient stock falls below its configured threshold.	Medium	An alert is generated when an ingredient's stock level falls below the configured threshold.

1.User Management

- Role-based access (Admin, Manager, Cashier, Staff)
  Secure login and logout
- User profile creation and modification

2.Menu Management

- Categorization (Starters, Main Course, Beverages, etc.)
- Price and availability management

3.Order Management

- Dine-in, Takeaway, and Online order handling
- Real-time order status (Placed, Preparing, Served, Completed)
- Order modification and cancellation
- Kitchen order display (KDS)

4.Table Management

- Table allocation and availability tracking
- Table reservation management
- Merge and split tables

5.Billing and Payment

- Automatic bill generation
- Tax and discount calculation
- Multiple payment modes (Cash, Card, UPI, Wallets)
- Invoice/receipt generation

6.Inventory Management

- Stock level tracking
- Ingredient usage mapping with menu items
- Low stock alerts
- Supplier management

7.Customer Management

- Customer profile creation
- Order history tracking

- Loyalty points and offers
- Feedback and ratings capture

8.Reports and Analytics

- Daily/Monthly sales reports
- Order and revenue analytics
- Inventory consumption reports
- Staff performance reports

9.Notifications and Alerts

- Order confirmation alerts
- Low inventory notifications
- Payment status alerts

10.System Configuration

- Tax and service charge setup
- Business hours configuration
- Multi-branch support (if applicable)

Advanced Features :

1.Online Ordering Integration

- Website and mobile app ordering support
- Integration with third-party platforms (Swiggy, Zomato, Uber Eats)
- Real-time order synchronization

2.AI-Based Demand Forecasting

- Predict daily/weekly demand

- Recommend stock replenishment
- Reduce food wastage

3.Dynamic Pricing and Offers

- Time-based pricing (happy hours)
- Personalized offers for repeat customers
- Automatic discount rules

4.Advanced Inventory Automation

- Auto-deduction of ingredients on order completion
- Expiry date tracking
- Supplier-wise inventory analysis

5.Customer Loyalty & CRM

- Tier-based loyalty programs
- Personalized notifications and offers
- Customer behavior analytics

6.Smart Kitchen Management

- Kitchen Display System (KDS) with priority orders
- Preparation time tracking
- Performance monitoring of kitchen staff

7.Contactless Dining

- QR code-based menu and ordering
- Contactless payment options
- Digital bill and feedback system

9.Analytics Dashboard

- Real-time business insights
- Sales trend visualization
- Profit and loss analysis

10.Multi-Branch & Franchise Management

- Centralized control of multiple outlets
- Branch-wise reporting
- Central menu and pricing management

11.Security & Data Protection

- Data encryption and secure transactions
- Audit logs and activity tracking
- Backup and disaster recovery support

Functional Requirements :

1.User Authentication & Authorization

- System shall allow users to log in and log out securely
- System shall support role-based access (Admin, Manager, Staff)
- System shall restrict access based on user roles

2.Menu Management

- System shall allow admin to add, update, and delete menu items
- System shall categorize menu items
- System shall update prices and availability in real time

3.Order Processing

- System shall accept dine-in, takeaway, and online orders
- System shall allow order modification before billing

- System shall update order status automatically

4.Table Management

- System shall allocate tables based on availability
- System shall support table reservation
- System shall allow merging and splitting of tables

5.Billing & Payment Processing

- System shall generate bills automatically
- System shall calculate taxes, discounts, and service charges
- System shall support multiple payment modes

6.Inventory Management

- System shall track stock levels of ingredients
- System shall update inventory on order completion
- System shall generate low-stock alerts

7.Customer Management

- System shall store customer details
- System shall track customer order history
- System shall manage loyalty points and offers

8.Reporting & Monitoring

- System shall generate sales and revenue reports
- System shall provide inventory usage reports
- System shall support staff performance monitoring

9.Notification Management

- System shall send order confirmation notifications
- System shall alert staff about low inventory
- System shall notify payment status

10.System Configuration

- System shall allow tax and pricing configuration
- System shall support business hours setup
- System shall support multi-branch configuration

Key Stakeholders :

1.Restaurant Owner

- Primary decision-maker
- Defines business goals and policies
- Approves budget and system implementation

2.Restaurant Manager

- Oversees daily operations
- Manages staff and table allocation
- Uses reports for performance monitoring

3.Kitchen Staff / Chef

- Receives and processes food orders
- Updates order preparation status
- Ensures timely food preparation

4.Service Staff / Waiters

- Takes customer orders
- Updates order status
- Assists in billing and customer service

5.Cashier / Billing Staff

- Handles billing and payments
- Generates invoices and receipts
- Manages refunds and discounts

6.Customers

- Place dine-in, takeaway, or online orders
- Make payments and provide feedback
- Use loyalty programs and offers

System Administrator

- Manages system configuration
- Handles user access and security
- Maintains data backups

7.Inventory Supplier / Vendor

- Supplies raw materials
- Receives purchase and stock requests
- Coordinates delivery schedules

8. IT Support / Development Team

- Develops and maintains the system
- Handles system upgrades and bug fixes
- Ensures system availability and performance

9.Third-Party Service Providers

- Payment gateway providers
- Online food delivery platforms
- SMS/Email notification services

Schedule and Milestones :

- **Project Initiation & Planning**
  Requirement gathering and stakeholder meetings
  Feasibility study and scope finalization
  Duration: Week 1
  Milestone: BRD approval

- **System Design**
  High-level system architecture design
  Database and UI/UX design
  Duration: Week 2
  Milestone: Design sign-off

- **Development Phase**
  Core feature development (orders, billing, inventory)
  Advanced feature development (online ordering, analytics)
  Duration: Weeks 3–6
  Milestone: Feature-complete build

- **Integration & Testing**
  Integration of payment gateways and third-party services
  Functional and system testing
  Bug fixing and performance tuning
  Duration: Weeks 7–8
  Milestone: Tested and stable system

- **User Acceptance Testing (UAT)**
  Testing by restaurant staff and management
  Feedback collection and final changes
  Duration: Week 9
  Milestone: UAT sign-off

- **Deployment**
  System installation and configuration
  Data migration (menu, users, inventory)
  Duration: Week 10
  Milestone: Go-live

- **Training & Documentation**
  Staff training sessions
  User manuals and technical documentation
  Duration: Week 10 (parallel)
  Milestone: Trained users

- **Post-Implementation Support**
  Monitoring system performance
  Bug fixes and minor enhancements

Duration: Weeks 11–12
Milestone: Project closure

Overall Project Timeline (Note)

- **Total Duration:** 12 Weeks
  Final Milestone: Successful project handover

Resources :

- ### Human Resources

Project Manager – project planning, coordination, and monitoring
Business Analyst – requirement gathering and BRD preparation
UI/UX Designer – user interface and experience design
Backend Developer – server-side logic and database development
Frontend Developer – web/mobile application development
QA/Test Engineer – testing and quality assurance
System Administrator – deployment and maintenance
Restaurant Staff (for UAT) – user acceptance testing and feedback

- ### Technical Resources

Application Servers – hosting of restaurant management system
Data Server – storage of orders, users, inventory, and reports
POS Systems – billing and order processing
Kitchen Display System (KDS) – order display for kitchen staff
Networking Equipment – routers, switches, internet connectivity

- ### Software Resources

Operating System – Windows/Linux
Database Management System – MySQL / PostgreSQL
Backend Technologies – Java / Python / Node.js
Frontend Technologies – HTML, CSS, JavaScript, React
Testing Tools – Selenium, Postman
Version Control System – Git

- ### Third-Party Service

Online Food Delivery Platforms – Swiggy, Zomato
Notification Services – SMS and Email APIs

Cloud Services – AWS / Azure / Google Cloud
Payment Gateways – UPI, Credit/Debit Card

- ## Physical Resources

Desktop Systems/Tablets – for billing and order entry
Receipt Printers – invoice printing
Barcode/QR Scanners – menu access and billing
Backup Power Supply – UPS for system availability

- ## Financial Resources

Infrastructure Cost

Development Cost

Licensing and Subscription Fees

Maintenance and Support Cost

Risk and Mitigation

Risk	Mitigation

Technical • **System Performance Issues:** Slow response times, downtime during peak hours, or poor mobile performance can affect restaurant operations. • **Cybersecurity Threats:** Data breaches, unauthorized access, or malware attacks can compromise customer and business data. • **Payment Integration Failures:** Errors in POS or payment gateway integration may cause failed transactions or revenue loss. • **System Integration Issues:** Problems integrating with third-party delivery services, POS systems, or APIs can disrupt workflows. • **Data Loss or System Failure:** Hardware failures or software bugs may lead to loss of critical operational data	**Technical** • **Scalable Infrastructure:** Use cloud-based, scalable infrastructure to handle peak loads efficiently. • **Robust Security Measures:** Implement encryption, firewalls, role-based access control, and intrusion detection systems. • **Regular Security Audits:** Conduct periodic vulnerability assessments and penetration testing. • **Reliable Integrations:** Use well-documented APIs and conduct thorough testing before deploying integrations. • **Data Backup & Recovery:** Implement automated backups and a disaster recovery plan to ensure business continuity.
Operation • **Order Management Errors:** Incorrect order routing between online orders, POS, and kitchen systems can cause delays. • **Inventory Inaccuracies:** Stock mismanagement may result in shortages, overstocking, or increased food waste. • **Staff Management Challenges:** Poor scheduling or access control issues can impact productivity and payroll accuracy. • **Customer Service Issues:** Delayed support or unresolved complaints can damage customer satisfaction and loyalty. • **Fraudulent Transactions:** Fake orders, chargebacks, or misuse of loyalty programs can affect revenue. **Market** • **High Competition:** Numerous restaurant management platforms may limit market penetration.	**Operation** • **Automated Order Workflow:** Implement real-time order tracking and Kitchen Display Systems (KDS). • **Robust Inventory Management:** Use real-time inventory tracking, alerts, and recipe costing tools. • **Role-Based Access Control:** Assign permissions based on staff roles to prevent errors and misuse. • **Customer-Centric Support:** Provide 24/7 support, feedback systems, and quick issue resolution. • **Fraud Prevention Tools:** cks, and fraud detection systems.Use transaction monitoring, verification checks & Fraud detection system. **Market** • **Product Differentiation:** Offer comprehensive features such as CRM, analytics, loyalty programs, and mobile-first design.

• **Changing Customer** Expectations: Demand for faster service, mobile-first experiences, and personalization may increase. • **Economic Fluctuations:** Reduced restaurant spending during economic downturns can impact subscriptions. • **Technology Adoption Resistance:** Some restaurants may be reluctant to switch from traditional system.	• **Agile Product Development:** Continuously update features based on customer feedback and market trends. • **Strong Branding & Value Proposition:** Highlight efficiency gains, cost savings, and improved customer experience. • **Flexible SaaS Pricing:** Provide scalable subscription plans tailored to restaurant size and needs.
Financial · **Insufficient Funding:** Inadequate capital to support day-to-day operations, marketing initiatives, and required technology investments. · **High Operating Costs:** Elevated overhead expenses, including marketing, inventory procurement, logistics, and shipping costs**.** · **Negative Cash Flow:** Limited cash inflows that may hinder the ability to cover operational expenses and meet debt or supplier obligations.	**Financial** · **Financial Planning:** Develop a detailed financial plan and budget to forecast expenses, revenues, and cash flow requirements accurately. · **Cost Control:** Implement cost-cutting measures, negotiate better supplier terms, and optimize operational processes to reduce overhead. · **Diversified Revenue** Streams: Expand revenue sources by offering complementary products and services such as accessories, apparel, custom products, or premium services.

Assumptions

1. Technical Assumptions

- The system will be a cloud-hosted, web-based SaaS application.
- Restaurants will have reliable internet connectivity for real-time operations.
- Users will access the system through standard web browsers.
- Existing POS systems and basic hardware will be compatible.
- The chosen technology stack will support security, scalability, and performance.
- Third-party services (payment, SMS, email) will be available and stable.
- Data backup and security will be handled by the hosting platform.
- No major technology changes will occur during development.

2. Business Assumptions

- Restaurant management is willing to shift to digital systems.
- Stakeholders will provide timely inputs, approvals, and feedback.
- The SaaS subscription model will be affordable for target users.
- Business rules (tax, pricing, discounts) will be clearly defined.
- The system targets small to medium single-location restaurants.
- GST and regulatory rules will remain unchanged during the project.
- Reports generated will be used for business decision-making.
- Advanced features are excluded from the current phase.

3. Operational Assumptions

- Staff will have basic computer knowledge.
- Training and documentation will be provided before go-live.
- Restaurant processes will follow standard operational practices.
- Staff will consistently use the system for daily operations.
- A manager or admin will handle system configuration and access.
- The system will handle normal peak-hour workloads.
- Required hardware will be managed by the restaurant.
- Post-scope changes may affect cost, timeline, or delivery.
