User Requirements Document

for

Restaurant Management Business

Introduction

Project Overview:

The Restaurant Management System (RMS) is a cloud-based platform that integrates ordering, reservations, inventory, staff management, payments, and reporting into one system for web and mobile use. It helps restaurants improve efficiency, reduce costs, and enhance customer experience through real-time data and automation. With features like online ordering, table booking, POS and kitchen integration, and business analytics, RMS enables smarter decision-making and supports business growth through a secure and scalable SaaS model.

Project Goal:

1. Improve Order Management
The system will allow customers to place online orders and track them in real time while the kitchen and staff receive orders instantly.

2. Streamline Restaurant Operations
The system will manage table reservations, billing, kitchen orders, and staff work from one platform.

3. Enhance Customer Experience
Customers can book tables, place orders, earn loyalty points, and give feedback easily through the system.

4. Manage Inventory Efficiently
The system will track inventory levels, alert for low stock, and help in purchasing and costing recipes.

5. Increase Business Profitability
Sales, customer behavior, and inventory reports will help owners improve performance and profits.

6. Improve Staff Management
The system will manage staff schedules, roles, and communication for smoother operations.

7. Ensure Data Security and Reliability
The system will use secure login, data encryption, and backups to keep all information safe.

Target Audience:

- Restaurant owners and managers who want to automate daily work
- Small cafés, pizza shops, and fast-food outlets
- Medium and large restaurants with many tables and staff
- Cloud kitchens and online food delivery businesses

Key Features:

1. Order Management

- Online food ordering via web & mobile
- Table reservation system with time slots & waitlist
- Real-time order tracking
- Kitchen Display System (KDS)
- POS system integration

2. Inventory Management

- Real-time stock tracking
- Low-stock alerts
- Purchase order management
- Recipe costing & profitability analysis

3. Customer Relationship Management (CRM)

- Customer profiles & order history
- Loyalty programs (points, rewards, offers)
- Customer feedback & review management.

4. Reporting & Analytics

- Sales performance & trend reports
- Inventory usage & waste analysis
- Customer behavior & loyalty insights

5. Staff Management

- Employee scheduling & attendance tracking
- Payroll support

- Role-based access control
- Internal communication tools

6. User Interface & Experience

- Clean, intuitive UI
- Mobile-first design
- Personalized dashboards with KPIs

7. Integration & API

- Payment gateways integration
- Delivery service integration
- Open API for third-party/custom apps

8. Security & Data Privacy

- Data encryption
- Backup & disaster recovery
- GDPR / CCPA compliance

9. Scalability & Performance

- Cloud-based scalable architecture
- High performance & fast response times

10. Customer Support

- 24/7 multi-channel support
- Knowledge base & FAQs
- Regular updates & maintenance

11. SaaS Model

- Subscription-based pricing
- Feature-based plans
- Continuous upgrades

Problems:

1. Manual order and billing processes cause errors and delays.
2. Poor management of online orders and table reservations.
3. Lack of real-time order tracking between staff and kitchen.
4. Inefficient inventory control leading to wastage or stock shortages.
5. Difficulty tracking sales, profits, and performance.
6. Poor customer data, feedback, and loyalty management.
7. Manual staff scheduling and payroll issues.
8. Lack of data security, scalability, and system integration.

Opportunities:

1. **Online Ordering & Delivery:** Growing demand for food ordering through apps and websites.
2. **Cloud-based POS & Management Systems:** Restaurants need digital tools to manage sales, billing, and operations.
3. **Customer Loyalty & CRM:**Using data to attract, retain, and personalize service for customers.
4. **Inventory & Cost Control:** Software helps reduce food waste and increase profit.
5. **Analytics & Reporting:**Restaurants use data to improve pricing, menus, and staffing.
6. **Multi-channel Integration:** Linking delivery apps, payments, and marketing platforms in one system.
7. **Automation & Staff Management:**Scheduling, payroll, and kitchen display systems improve efficiency
8. **Subscription-based SaaS Solutions:** Selling restaurant management software as a monthly service is a fast-growing business.

User Personas

1. Restaurant Owner – “Amit”

Needs

- Real-time sales and profit reports.
- Inventory & food cost tracking .
- Customer retention tools (loyalty, CRM).
- Multi-branch performance view.
- Simple subscription & billing management

Behaviors

- Logs in daily to check dashboard KPIs
- Reviews weekly sales and wastage
- Tracks best-selling items
- Approves purchase orders
- Uses loyalty campaign tools monthly

Pain Points

- Doesn’t know where money is being lost
- Hard to track food wastage
- No visibility into customer behavior
- Using Excel + POS + paper = messy
- Needs data but hates complexit

2. Restaurant Manager – “Neha”

Needs

- Live order tracking
- Staff scheduling & attendance
- Table reservation control
- Inventory alerts
- Kitchen coordination

Behaviors

- Uses dashboard all day
- Assigns staff shifts
- Monitors orders during rush hours
- Checks low-stock alerts

- Resolves customer complaints

Pain Points

- Orders get missed or delayed
- Kitchen and front staff miscommunication
- No visibility on real-time stock
- Overworked during peak hours
- Manual scheduling mistakes

3. Kitchen Staff – “Ravi”

Needs

- Clear, real-time order display (KDS)
- Priority and preparation time
- Order status updates
- Less paper tickets

Behaviors

- Looks at Kitchen Display Screen
- Marks items as “in progress” or “ready”
- Communicates with waiters via system

Pain Points

- Handwritten orders cause mistakes
- Cannot see order priority
- Last-minute changes are not visible
- Delays create angry customers

4. Cashier / POS Operator – “Priya”

Needs

- Easy POS system
- Split bills & multiple payment methods
- Order syncing with kitchen
- Customer lookup (loyalty)

Behaviors

- Enters orders all day
- Applies discounts & loyalty points
- Collects payments
- Prints receipts

Pain Points

- POS not syncing with kitchen
- Slow billing during rush
- Mistakes in customer data
- Manual discount tracking

5. Customer – “Rahul”

Needs

- Mobile ordering
- Table reservation
- Order tracking
- Loyalty points & offers
- Fast checkout

Behaviors

- Orders online
- Reserves tables before coming
- Tracks food status
- Uses coupons
- Leaves reviews

Pain Points

- Long waiting times
- Wrong orders
- No reward for loyalty
- No idea when food will arrive

6. Supplier – “Kumar”

Needs

- Digital purchase orders

- Delivery schedules
- Payment status

Behaviors

- Receives order**Primary Users:R**s from system
- Confirms availability
- Delivers goods

Pain Points

- Manual phone orders
- Missing or wrong quantities
- Late payments

User list from the User Persona

Primary Users:

1)Restaurant Owner – Amit

- **Needs-**Time sales, profit, and expense reports,Food cost and inventory valuation,Customer loyalty and CRM insights,Multi-branch performance view,Staff productivity reports,Secure access and data backups,Subscription & billing management
- **Behaviors-**Logs in daily or weekly to view dashboard KPIs,Compares branch-wise revenue and costs,Reviews profit margins of menu items
  Checks loyalty campaign performance,Approves purchase orders,Downloads financial reports for accountants.

2)Restaurant Manager – Neha

- **Needs-**Live order and table status,Staff schedules and attendance tracking,Inventory level alerts,Kitchen workload view,Reservation and waitlist management,Customer complaint and feedback access
- **Behaviors-**Uses system continuously during service hours,Monitors orders during peak times,Assigns staff shifts in the system,Updates table availability,Acts on low-stock notifications,Reviews daily sales and wastage.

3) Kitchen Staff – Ravi

- **Needs-**Clear digital order display (KDS),Item priority and preparation timer
  Real-time order updates and modifications,Simple “Ready / In Progress” buttons
  Minimal screen clutter.
- **Behaviors-**Reads incoming orders from KDS,Starts and completes food preparation,Updates order status,Coordinates with service staff Manages rush-hour queues,Flags delayed or missing items.

User Stories-

Below are the highlights of main user stories according to the user persona listed above

1)Restaurant Owner – Amit (Strategic Control)

- As a restaurant owner, I want to see real-time sales, profit, and expenses, so I can understand how my business is performing.
- As an owner, I want to see food cost and wastage reports, so I can reduce losses.
- As an owner, I want to view best-selling and low-selling items, so I can optimize my menu.
- As an owner, I want to track customer loyalty and repeat visits, so I can improve retention.
- As an owner, I want to compare performance across branches, so I can manage multiple locations.
- As an owner, I want to approve purchase orders digitally, so I can control spending.

2)Restaurant Manager – Neha (Operations Control)

- As a manager, I want to see all live orders and table status, so I can keep service running smoothly.
- As a manager, I want to assign and adjust staff schedules, so I can handle busy periods.
- As a manager, I want to get low-stock alerts, so I can reorder before items run out.
- As a manager, I want to monitor kitchen workload, so I can avoid delays.
- As a manager, I want to manage reservations and waitlists, so I can reduce crowding.
- As a manager, I want to view daily sales and wastage, so I can improve efficiency.

3)Kitchen Staff – Ravi (Execution Speed)

- As a chef, I want to see new orders instantly on the Kitchen Display System, so I can start cooking immediately.
- As a chef, I want to see item priority and preparation time, so I can cook in the right order.
- As a chef, I want to mark dishes as “in progress” or “ready”, so service staff knows when to serve.
- As a chef, I want to receive updates when orders change, so I don’t prepare the wrong food.

4)Cashier – Priya (Fast Transactions)

- As a cashier, I want to create orders quickly, so customers are not kept waiting.
- As a cashier, I want to accept multiple payment types, so every customer can pay easily.
- As a cashier, I want to split bills and apply discounts, so billing is flexible.
- As a cashier, I want to apply loyalty points automatically, so customers feel rewarded.

- As a cashier, I want to send orders to the kitchen instantly, so there are no delays.

5)Customer – Rahul (Great Experience)

- As a customer, I want to order food from my phone, so I don't have to wait.
- As a customer, I want to reserve a table online, so I don't stand in queues.
- As a customer, I want to track my order status, so I know when my food will arrive.
- As a customer, I want to earn and use loyalty points, so I get rewarded.
- As a customer, I want to pay quickly, so I can leave without delay.
- As a customer, I want to give feedback, so the restaurant can improve.

6)Supplier – Kumar (Supply Chain)

- As a supplier, I want to receive digital purchase orders, so nothing is missed.
- As a supplier, I want to see delivery schedules, so I can plan shipments.
- As a supplier, I want to confirm availability and quantities, so there are no errors.
- As a supplier, I want to track payment status, so I know when I will be paid.

For the General User:

- **As a customer,** I want to order food online so I can easily place orders from my phone or computer.
- **As a customer,** I want to reserve a table so I don't have to wait when I arrive at the restaurant.
- **As a customer,** I want to track my order so I know when my food will be ready.
- **As a kitchen staff member,** I want to see incoming orders on a kitchen display so I can prepare them quickly and accurately.
- **As a cashier,** I want the system to connect to the POS so payments and orders are processed smoothly.
- **As a manager,** I want to track inventory in real time so I never run out of important ingredients.
- **As a manager,** I want to receive low-stock alerts so I can reorder supplies on time.
- **As a manager,** I want to see recipe costs so I can control food expenses and improve profit.
- **As a customer,** I want my order history saved so I can reorder my favorite meals easily.
- **As a loyal customer**, I want to earn reward points so I get discounts and special offers.
- **As a customer,** I want to give feedback so the restaurant can improve its service.
- **As a manager,** I want to view sales reports so I can understand which items sell the most.
- **As a manager,** I want to see customer behavior reports so I can create better promotions.

- **As a staff manager,** I want to create employee schedules so work shifts are well organized.
- **As a staff member,** I want role-based access so I only see the information I need.
- **As a restaurant owner,** I want all data to be secure so customer and business information is protected.
- **As a user,** I want the system to work well on mobile so I can use it anywhere.
- **As a customer,** I want to contact support easily so I can get help when needed.

Use Case:

1) Customer Use Cases:

- **Register / Login:**Customers create an account or login
- **Browse Menu:**View food categories, prices & images
- **Place Online Order:**Order food from website or mobile app
- **Customize Order**:Add/remove ingredients, choose size
- **Track Order:**View real-time order status
- **Make Table Reservation**:Reserve tables with date & time
- **Join Waitlist:**Get notified when table is available
- **Make Payment:**Pay using card, UPI, wallet, etc
- **Earn Loyalty Points:**Get reward points for every purchase
- **Redeem Rewards:**Use loyalty points for discounts
- **Give Feedback:**Submit ratings, reviews, and complaints
- **View Order History:**Check past orders & invoices

2) Staff (Waiter / Kitchen / Cashier) Use Cases

- **Login**:Secure staff access
- **View Assigned Orders:**View orders assigned to their station
- **Update Order Status:**Mark orders as preparing, ready, served
- **Send Orders to Kitchen:**Waiters submit customer orders
- **Kitchen Display:**Kitchen sees real-time orders
- **Process Payment:**Cashiers accept and close bills
- **Manage Tables:**Cashiers accept and close bills
- **Check Inventory:**Assign, move, and close tables.

ADMIN USE CASES:

1)System & User Management

- **Create Staff Accounts-**Add employees and role
- **Assign Roles & Permissions-**Control access (manager, waiter, chef, cashier)
- **Deactivate Users-**Remove or suspend user
- **Reset Passwords-**help staff regain access

2) Menu & Pricing Management

- **Add / Edit Menu Items-**Add dishes, images, prices
- **Create Categories-**Starters, main course, drinks etc
- **Update Prices-**change price based on market.
- **Manage Offers -**Add discounts ,coupons
- **Recipe Costing -**Calculate food code & profits

3)Order & Reservation Management

- **View All orders-** Monitor dine-in,online & delivery.
- **Modify order-** Edit or cancel orders
- **Assign Order-**Route Order to kitchen
- **Manage Reservation -**Approve,Reschedule or cancel
- **Manage Waitlist -** Control customer queue

4)Inventory & Supplier Management

- **Track Inventory** -Monitor Stock in real time
- **Set low stock Alerts-**AutomaticWarning
- **Create Purchase orders -**Order from suppliers
- **View supplier list-**Manage Vendors
- **Track Waste** -Reduce food loss

5)CRM & Loyalty Management

- **View Customer Profile-**Order ,preference
- **Create Loyalty Programs-**Set rewards rules
- **Send promotion** -SMS,email offers
- **Analyze Customer** Behaviors-Buying trend

6)Reporting & Analytics

- **View Sales Report -**Daily ,Monthly, revenue
- **View Inventory Reports-**Usage & Wastage
- **Staff performance -**Productivity and attendance
- **Profit Analysis -**Recipe and product profitability
- **Export Report-**Pdf/Excel

7)System & Security Management

- **Data Backup-**Protect business data
- **Restore Data -**Disaster recovery
- **Manage Integration -**POS,payment gateway
- **API Management -**Enable external system
- **Subscription Managment-**Saas plans& billing

Functional Requirements

1. User Management

- The system shall allow users to register and log in as Customers, Staff, or Administrators.
- The system shall allow administrators to create, update, deactivate, and delete user accounts.
- The system shall support role-based access (Admin, Manager, Cashier, Kitchen Staff, Customer).
- The system shall allow users to reset and update their passwords.
- The system shall store user profiles including name, contact details, and role.

2. Online Ordering

- The system shall allow customers to browse the restaurant menu online.
- The system shall allow customers to add, update, and remove items from their cart.
- The system shall allow customers to place orders through the website or mobile app.
- The system shall allow customers to choose dine-in, takeaway, or delivery.
- The system shall allow customers to make online payments through integrated payment gateways.
- The system shall generate an order confirmation after successful order placement.

3. Table Reservation

- The system shall allow customers to book tables online.
- The system shall allow customers to select date, time, and number of guests.
- The system shall maintain availability of tables.
- The system shall place customers on a waitlist if tables are unavailable.
- The system shall notify customers of reservation confirmations and changes.

4. Order Tracking & Kitchen Display

- The system shall display all new orders in the Kitchen Display System (KDS).
- The system shall allow kitchen staff to update order status (Received, Preparing, Ready, Served).
- The system shall allow customers to track order status in real time.
- The system shall notify staff when an order is delayed.

5. POS Integration

- The system shall synchronize orders with the POS system.
- The system shall record all sales transactions.
- The system shall generate digital receipts.

6. Inventory Management

- The system shall track ingredient and item stock levels in real time.
- The system shall automatically update inventory when orders are placed.
- The system shall generate low-stock alerts.
- The system shall allow staff to create purchase orders.
- The system shall store supplier details.
- The system shall calculate recipe costs.

7. Customer Relationship Management (CRM)

- The system shall store customer profiles and order history.
- The system shall allow customers to enroll in loyalty programs.
- The system shall calculate and store loyalty points.
- The system shall generate personalized offers.
- The system shall collect customer feedback and ratings.

8. Reporting & Analytics

- The system shall generate daily, weekly, and monthly sales reports.
- The system shall generate inventory usage reports.
- The system shall generate customer behavior reports.
- The system shall allow managers to export reports.

9. Staff Management

- The system shall allow managers to create and edit employee schedules.
- The system shall track staff attendance.
- The system shall calculate payroll data.
- The system shall allow staff to communicate through the system.

10. Security & Data Management

- The system shall encrypt sensitive data.
- The system shall allow data backup and recovery.
- The system shall log all critical system activities.

11. SaaS Subscription Management

- The system shall allow restaurants to subscribe to different plans.
- The system shall manage billing and payments.
- The system shall enable feature access based on subscription level.

Non-Functional Requirements

1. Performance

- The system shall process customer orders within 2 seconds under normal load.
- The system shall support at least 1,000 concurrent users without performance degradation.
- The system shall display real-time order and inventory updates with a delay of no more than 5 seconds.

2. Availability & Reliability

- The system shall be available 99.9% of the time excluding scheduled maintenance.
- The system shall automatically recover from system failures.
- The system shall not lose transaction data in the event of a system crash.

3. Scalability

- The system shall support multiple restaurants and branches.
- The system shall scale automatically as the number of users, orders, and data increases.
- The system shall allow addition of new features without disrupting existing operations.

4. Security

- The system shall encrypt all sensitive customer and payment data.
- The system shall require secure login using authentication and authorization.
- The system shall prevent unauthorized access using role-based security.
- The system shall log all security-related activities.

5. Data Privacy & Compliance

- The system shall comply with data protection regulations such as GDPR and CCPA.
- The system shall allow users to view, edit, and delete their personal data.
- The system shall not share customer data without consent.

6. Usability

- The system shall provide an intuitive and user-friendly interface.
- The system shall support both web and mobile platforms.
- The system shall allow users to complete any main task within 3 clicks.
- The system shall provide accessibility features for disabled users.

7. Maintainability

- The system shall allow easy updates and bug fixes.
- The system shall provide logs for troubleshooting.
- The system shall support modular upgrades without downtime.

8. Backup & Recovery

- The system shall perform automatic daily data backups.
- The system shall restore all data within 1 hour after a failure.
- The system shall store backups in a secure off-site location.

9. Integration & Compatibility

- The system shall be compatible with common POS systems.
- The system shall support integration with third-party payment gateways and delivery platforms.
- The system shall provide API access for external systems.

10. Customer Support & Service

- The system shall provide 24/7 customer support.
- The system shall include a knowledge base and FAQs.
- The system shall notify users of updates and maintenance.

Technical Requirements

1. System Architecture

- **Web-based & Mobile-compatible** system (responsive web + mobile apps)
- **Cloud-hosted architecture** (AWS / Azure / GCP)
- **Modular / microservices-based design** for scalability and maintainability
- **Multi-tenant SaaS architecture** to support multiple restaurants

2. Frontend Requirements

- Web application built using **modern frameworks** (React / Angular / Vue)
- Mobile apps using **Flutter / React Native / native Android & iOS**
- **Role-based UI** (Admin, Manager, Staff, Customer)
- Real-time UI updates for orders and kitchen display (WebSockets)

3. Backend Requirements

- Backend developed using **Node.js / Java / .NET / Python**
- **RESTful APIs** (and/or GraphQL) for all system operations
- Business logic for:
    - Order processing
    - Inventory updates
    - Loyalty and CRM
    - Reporting & analytics

4. Database & Storage

- **Relational Database** (PostgreSQL / MySQL) for transactions
- **NoSQL Database** (MongoDB / Redis) for caching and real-time data
- Secure storage for:
    - Customer data
    - Orders
    - Inventory
    - Staff records
- Automated **data backup & recovery**

5. Integration Requirements

- **POS system integration**
- **Payment gateway integration** (Stripe, PayPal, Razorpay, etc.)
- **Third-party delivery platforms** (Uber Eats, DoorDash, Zomato, etc.)
- Open **API layer** for external systems and future extensions

6. Security Requirements

- **Authentication & Authorization** (JWT / OAuth 2.0)
- **Role-Based Access Control (RBAC)**
- **Data encryption** (HTTPS/TLS, encrypted database fields)
- Compliance with **GDPR / CCPA**
- Secure audit logs and activity tracking

7. Performance & Scalability

- Support **high concurrent users** during peak hours
- **Real-time order tracking** with minimal latency
- Auto-scaling infrastructure
- Caching (Redis/CDN) for faster performance

8. Reporting & Analytics

- Real-time dashboards
- Scheduled and on-demand report generation
- Export reports in **PDF / Excel**
- Data visualization support (charts, KPIs)

9. Deployment & Maintenance

- CI/CD pipeline for automated deployment
- Environment separation (Dev / Test / Prod)
- Monitoring & logging (CloudWatch, ELK, etc.)
- Regular updates and version control

10. Support & Availability

- **99.9% uptime**
- 24/7 system monitoring
- Error handling and failover mechanisms

Open Questions and Risks

Open Questions

1. Business & Scope

- Will the system support single restaurant only or multi-branch chains?
- Is the solution intended for specific regions/countries (tax rules, currencies, languages)?
- What is the target rollout strategy (pilot → phased → full launch)?
- Are there custom workflows required for different restaurant types (QSR, fine dining, café)?

2. Order & Reservation Management

- Should online ordering support scheduled / advance orders?
- How should the system handle order modifications or cancellations after confirmation?
- What are the rules for table overbooking and waitlist prioritization?
- Is offline mode required if internet connectivity is lost?

3. POS & Third-Party Integrations

- Which specific POS systems must be supported initially?
- Are POS integrations expected to be real-time or batch-based?
- Which payment gateways and delivery platforms are mandatory at launch?
- Who is responsible for maintenance of third-party integrations when APIs change?

4. Inventory & Suppliers

- How accurate must inventory tracking be (manual vs. automatic deduction)?
- Will suppliers have direct system access for purchase orders?
- Are multiple units of measurement required for ingredients (kg, liters, pieces)?

5. CRM & Loyalty

- Should loyalty points be shared across branches or isolated per location?
- Will the system support promo codes, coupons, and dynamic pricing?
- How long should customer data and order history be retained?

6. Reporting & Analytics

- Are custom reports required beyond standard dashboards?
- Should reports support real-time analytics or scheduled batch generation?
- Who can access financial and staff performance reports?

7. Staff & Payroll

- Is payroll calculation fully automated or export-only?
- Are local labor law rules (overtime, breaks) required in scheduling?
- Should biometric or third-party attendance systems be integrated?

8. Security & Compliance

- Which compliance standards are mandatory (GDPR, CCPA, PCI-DSS)?
- Is multi-factor authentication (MFA) required?
- Who owns the data in a SaaS model—the platform or the restaurant?

9. SaaS & Operations

- What are the subscription tiers and feature limits?
- How will tenant isolation be enforced technically?
- What is the expected SLA and uptime guarantee?

Risks

1. Technical Risks

- POS integration complexity due to diverse vendors and undocumented APIs
- Real-time performance issues during peak hours
- Scalability challenges with multi-tenant SaaS architecture
- Data inconsistency between POS, inventory, and orders

2. Security & Compliance Risks

- Risk of data breaches involving customer and payment data
- Non-compliance with regional data protection laws
- Inadequate role-based access leading to unauthorized data exposure

3. Operational Risks

- Dependence on third-party services (payment, delivery platforms)
- System downtime affecting restaurant operations and revenue
- Insufficient backup or disaster recovery leading to data loss

4. Business Risks

- Feature creep due to unclear scope or changing requirements
- Low adoption due to poor UI/UX or staff training gaps
- Pricing model may not align with small vs. large restaurants

5. Data & Reporting Risks

- Inaccurate inventory or sales data affecting decision-making
- Delayed or incorrect reports impacting financial planning

6. Support & Maintenance Risks

- High support costs due to 24/7 availability expectations
- Frequent updates from third-party APIs requiring rapid changes

Glossary

Key Terms and Definition

- **User Requirements**
  Descriptions of system features and functions that explain what users expect the system to do.
- **Online Ordering**
  A feature that allows customers to place food orders through a website or mobile application.
- **Table Reservation**
  A system that enables customers to book tables in advance with selectable time slots and waitlist options.
- **Order Management**
  The process of receiving, processing, tracking, and completing customer orders.
- **Order Tracking**
  A real-time feature that allows users and staff to monitor the status of placed orders.
- **Kitchen Display System (KDS)**
  A digital screen used in the kitchen to display and manage incoming food orders efficiently.
- **Point of Sale (POS) System**
  A system used to process customer payments and record sales transactions.
- **Inventory Management**
  A feature that tracks stock levels, ingredient usage, and generates low-stock alerts.
- **Real-Time Inventory Tracking**
  Continuous monitoring of inventory quantities as items are used or restocked.
- **Purchase Order Management**
  A function that allows users to create and manage orders placed with suppliers.
- **Recipe Costing**
  The calculation of the total cost of ingredients used to prepare a menu item.
- **Customer Relationship Management (CRM)**
  A system that stores customer data, preferences, and order history to improve service quality.
- **Customer Profile**
  A digital record containing customer details, past orders, and preferences.
- **Loyalty Program**
  A reward system that offers points, discounts, or benefits to repeat customers.
- **Customer Feedback**
  Reviews or ratings provided by customers to evaluate food and service quality.
- **Reporting and Analytics**
  Tools that generate reports on sales, inventory usage, and customer behavior.
- **Sales Report**
  A report that shows sales performance, trends, and peak business hours.
- **Staff Management**
  Features that help manage employee schedules, attendance, and roles.
- **Employee Scheduling**
  The process of assigning work shifts and managing staff availability.
- **Role-Based Permissions**
  Access control that limits system features based on user roles such as admin or staff.

- **User Interface (UI)**
  The visual layout through which users interact with the system.
- **User Experience (UX)**
  The overall ease of use and satisfaction a user feels while using the system.
- **Mobile-First Design**
  A design approach that prioritizes mobile usability before desktop versions.
- **Personalized Dashboard**
  A customized screen displaying relevant information and key performance indicators (KPIs).
- **Third-Party Integration**
  The connection of external services such as payment gateways and delivery platforms.
- **API (Application Programming Interface)**
  A set of rules that allows different software systems to communicate with each other.
- **Data Encryption**
  A security technique that protects sensitive user and business data.
- **Data Backup and Recovery**
  Processes used to store data copies and restore them in case of system failure.
- **Compliance**
  Adherence to data protection and privacy regulations such as GDPR and CCPA.
- **Scalability**
  The ability of the system to handle increased users and data without performance issues.
- **SaaS (Software as a Service)**
  A cloud-based software model accessed through a subscription.
- **Subscription-Based Pricing**
  A pricing model where users pay recurring fees based on features or usage.
- **Customer Support**
  Services provided to assist users with technical or operational issues.
